

Basics of JavaScript 1 Guided Project

Introduction

This week we will be building small programs in JavaScript to help us gain logic building skills.

We will be working with the basic concepts like variables, data types, operators, if else statements, loops and functions.

Housekeeping points

- This is a minimal example and may not follow some standard practices.
- We focus on the main flow, and not much error handling.

Problem Statement

Our task is as follows -

Write programs to understand the concepts of variables, data types, operators, if else statements, loops and functions as mentioned in the source code files.
